

Action Plus Tax — Complete Product Specification Document

1. Project Overview

The **Action Plus Tax platform** is a full digital system designed to:

- Attract new clients
- Convert visitors into customers
- Manage client data and services
- Handle secure document submissions
- Streamline internal operations

The system consists of three main parts:

1. Public Website (Marketing + Lead Generation)
2. Client Portal (User Dashboard)
3. Admin Dashboard (Business Control System)

2. Core Goal of the Platform

The system should:

- Remove manual communication (calls, WhatsApp, emails)
- Centralize all client activity
- Provide a professional and secure experience
- Make tax service processing smooth and organized

3. Navigation & Menu Structure

Main Navigation Bar

The navigation bar will be simple, clean, and conversion-focused.

Menu Items:

- Home
 - Services (Dropdown / Mega Menu)
 - About Us
 - Blog
 - Contact
 - Login / Sign Up (Client Portal)
 - CTA Button: “**Get Consultation**”
-

Services Mega Menu Structure

The **Services** menu will expand into categories:

1. Tax Services

- Tax Preparation & Filing
- Unfiled Tax Returns
- Self-Employed Taxes

2. Tax Resolution

- IRS Notices Handling
- Audit Assistance
- Penalty Resolution

3. Financial Services

- Tax Planning
- Bookkeeping
- Payroll Services

4. Business Services

- Business Valuation
- Financial Analysis

 Each item in the menu should directly open a **dedicated service page**

4. Home Page Flow

The homepage must guide users step-by-step:

Sections:

1. Hero Section
 - Strong headline
 - CTA buttons:
 - Get Consultation
 - Upload Documents
 2. Services Overview
 - Quick preview of all categories
 3. Why Choose Us
 - Trust, experience, benefits
 4. Process Section
 - Step-by-step how it works
 5. Testimonials (optional)
 6. Final CTA Section
 - Push user to act
-

5. Services Page (Detailed Behavior)

Each service page must include:

- Service Title
 - Clear Description (simple language)
 - Benefits
 - Required Documents (IMPORTANT)
 - CTA:
 - “Apply Now”
 - “Book Consultation”
-

Required Documents (Important Logic)

Each service must define required documents:

Example:

For Tax Filing:

- CNIC / SSN
- W-2 / Income Proof
- Bank Statements
- Previous Tax Returns

👉 These will later guide the **upload system and application form**

6. User Authentication System

Login & Signup Options:

Users must be able to:

- Sign up with Email
 - Login with Email
 - Login with Google (Google Authentication)
-

Signup Fields:

- Full Name
 - Email
 - Phone Number
 - Password
-

After Login:

User is redirected to **Client Dashboard**

7. Client Dashboard (Portal)

This is the **main working area for the client.**

Sections Inside Dashboard:

- Dashboard Overview
 - My Applications
 - Upload Documents
 - Appointments
 - Profile Settings
-

Dashboard Overview

Shows:

- Active applications
 - Document status
 - Recent activity
-

8. Application Submission System (VERY IMPORTANT)

This is the **core feature of the platform**.

Application Flow:

1. User selects a service
 2. Clicks “**Apply Now**”
 3. Application form opens
-

Application Form Fields:

Personal Information:

- Full Name
- Email

- Phone Number
 - Address
-

Identification Details (IMPORTANT):

- SSN / Tax ID
 - Date of Birth
 - Filing Status (Single / Married etc.)
-

Service Selection:

- Pre-selected service (auto from page)
-

Additional Fields:

- Notes / Comments
 - Previous tax filing (Yes/No)
-

Document Upload Inside Application

User must upload required documents:

- ID Proof
 - Income documents (W-2, 1099 etc.)
 - Bank statements
 - Any additional files
-

After Submission:

- Application is saved
- Status = **Pending**
- Visible in:
 - Client Dashboard
 - Admin Dashboard

9. Secure Document Upload System

Features:

- Upload multiple files
 - Show file names
 - Allow preview/download
 - Link documents to specific application
-

Document Status:

- Pending
 - Approved
 - Rejected
-

Important Behavior:

- Documents must be **linked to the application**
 - Admin must be able to review each file
-

10. Appointment Booking System

Booking Flow:

1. User clicks “Book Appointment”
 2. Selects service
 3. Chooses date
 4. Chooses time
 5. Submits request
-

Fields:

- Name
 - Email
 - Phone
 - Service
 - Date
 - Time
 - Notes
-

After Submission:

- Status = Pending
 - Visible to admin
-

11. Blog System

Blog Page:

- List of all blogs

Blog Detail Page:

- Full article
 - Title
 - Image
 - Content
-

12. Contact Page

Fields:

- Name
 - Email
 - Phone
 - Message
-

Behavior:

- Form submits to admin
 - Stored for follow-up
-

13. Admin Dashboard (FULL CONTROL SYSTEM)

Dashboard Overview

Shows:

- Total clients
 - Total applications
 - Pending applications
 - Recent activity
-

Client Management

- View all users
 - Open user profile
 - View their applications
-

Application Management (CORE)

Admin can:

- View all submitted applications
- Open full application details
- See uploaded documents
- Change status:
 - Pending
 - In Progress

- Completed
 - Rejected
-

Document Management

- View all documents
 - Download files
 - Approve/reject documents
-

Appointment Management

- View bookings
 - Approve/reschedule
-

Services Management

- Add/edit services
 - Define required documents
-

Blog Management

- Create/edit blogs
-

14. Notification System

System should notify:

Admin:

- New application
- New document upload
- New appointment

User:

- Application status update
 - Document approval/rejection
-

15. Security & Data Handling

- User data must be private
 - Documents must be secure
 - Only user & admin can access files
-

16. Complete System Flow

Full Cycle:

1. User visits website
 2. Selects service
 3. Fills application
 4. Uploads documents
 5. Submits application
 6. Admin receives it
 7. Admin reviews & updates
 8. User tracks progress
-

17. Final Outcome

This system will:

- Fully digitize Action Plus Tax operations
 - Replace manual processes
 - Improve efficiency
 - Provide a premium client experience
-

Final Note

This is not just a website —
it is a **complete business management system**.

Every feature must be built with:

- 👉 Simplicity
- 👉 Clarity
- 👉 Security
- 👉 Efficiency
